

Sonobe Origami Modules

Crease paper down the middle and unfold

Fold edges to center line and unfold

Fold top right and bottom left corners — do not let the triangles cross crease lines

Fold along vertical crease lines

Fold top left corner down to right edge

Fold bottom right corner up to left edge

Undo the last two folds

Tuck upper left corner under flap on opposite side and repeat for lower right corner

Turn the paper over, crease along dashed lines as shown to complete the module

Tuck the tip of one module into another. Approach from the side of the square.

Two modules assembled.

Continue adding modules in the same way. Do not allow tips of modules to be trapped inside. A cube requires six modules. Other shapes can also be built.
